+65 9119 6492 (Mobile)

chaoyi.louis.cheng@gmail.com

<https://www.linkedin.com/in/louis-cheng/>

A driven solutions consultant and manager focused on client satisfaction and team development. Extensive consulting experience on both vendor and client-sides. I've led teams of between 4 and 15 members.

My greatest strengths:

- **Breadth Of Experience** – I've held multiple roles on both vendor and client-sides, so I understand the entire customer engagement life-cycle and approach situations holistically.
- **Stakeholder Management:** Building authentic stakeholder relationships through honesty and reliability.
- **Ownership & Autonomy** – I'm comfortable making decisions under uncertainty instead of escalating.

CODE PORTFOLIO

My code portfolio lives at: <https://github.com/chaoyi-louis-cheng>

This contains a complete Name Screening solution I hand-coded from scratch, and includes the following modules: an ETL loader, World-Check list loader and name screener/string matcher. I'm currently using vibecoding/prompt engineering to add more features.

The following technical document summarizes the code and highlights key features: <https://github.com/chaoyi-louis-cheng/chaoyi-louis-cheng/blob/master/Louis%20Cheng%20-%20AML%20Code%20Portfolio.pdf>

KEY TECHNICAL SKILLS

Core Dev: Batch/Bash scripts, Java (Spring, Hibernate), JavaScript (React, Node.js), Python (FastAPI, Pandas)

Databases: SQL scripting & optimization, MySQL, Oracle, MSSQL Server

Markup & Formatting: XML, JSON, HTML/CSS, JSX, SOAP/WSDL, SAML

APIs & Auth: HTTP Methods, REST APIs, Webhooks, OAuth, ODIC, SSO, Postman, SSL/SCP/SFTP

Automation & Data Mangling: Make, Zapier, Alteryx, CTRL-M, Tricentis TOSCA, Pandas

Artificial Intelligence: OpenAI, Claude Code, Make AI agentic automation

PROFESSIONAL EXPERIENCE

VP2, TECHNICAL DELIVERY MANAGER (TRANSACTION MONITORING) – Aug 2023 To Present

United Overseas Bank

Career Objective: Gain technical leadership and people management experience with larger teams. Be exposed to the bank's AML roadmap and transformation initiatives, including budget & strategic planning.

I'm an applications lead and engineering manager heading a team of 15, supporting all Transaction Monitoring (TM) projects within my department. I manage all aspects of any integration touching the TM application.

For technical aspects, these include discovery/solutioning, sizing, architecture, design, testing and acceptance. The business aspects include: costing, negotiating engagements/budgets and preparing SOWs .

I also double-hat as a project manager/TPM on some projects. Hence, I frequently connect with both internal stakeholders (end users, security/network, up/downstream apps) and external vendors (for RFPs, POCs etc).

On the people management front, I handle hiring/training/mentoring, budgeting, resource allocation, instituting Agile team processes and building a cohesive, high performance culture.

Achievements:

- Successfully delivered 8 work-streams across 3 strategic projects, whilst supporting operations/BAU.
 - UOB had been directed by MAS to implement certain AML technical and regulatory directives.

- MAS had set hard deadlines to successfully implement these directives.
- I was specifically headhunted to design the solution and lead delivery of these strategic projects.
- Built a team of 15 from scratch – juggled staffing budgets, identified and hired talent, designed Agile team processes, facilitated knowledge transfer, managed their career objectives and kept them motivated.
- Involved in strategic and transformation initiatives, e.g. RFPs from vendors, POCs, AML market research.

VICE PRESIDENT, ACTIMIZE DESIGN EXPERT – Dec 2022 To Aug 2023

MUFG Bank

Career Objective: Gain solution and domain architect experience. I left this role early as I was headhunted by my former client (UOB) to deliver their AML strategic program.

- A senior IC/domain architect role - review technical materials/designs to gain a big-picture understanding.
- Identify and flag out design conflicts, pain points, or other design elements which don't make sense.

SENIOR TECHNICAL CONSULTANT – Sep 2018 To Nov 2022

NICE Actimize

Career Objective: Progress to a tech lead role directly responsible for project delivery.

NICE Actimize is a product vendor and global market leader in AML, anti-fraud and compliance.

- Senior SME & tech lead role heading a team of 4, managing delivery of all APAC TM projects.
- Supported presales activities from a technical angle, helped respond to RFPs/RFIs.
- Handled all technical solutioning activities – e.g. scripting/automation, data/ETL mapping and ingestion, rule logic, solution config, build/QA/delivery, web application deployments.
- Simultaneously juggled multiple integrations of about 9-18 months and around \$1-3 million in budget.
- Was occasionally forward-deployed at client sites to support projects.
- Interviewed prospective new hires, mentored and trained new consultants.

FULL-TIME PIANO TEACHER - November 2016 To Mar 2018

Self-Employed

Career Objective: Took a gap year to comply with a non-compete clause, and develop entrepreneurial skills.

- Differentiated myself by teaching adults, not children. My lessons emphasized understanding over drilling.
- Learned skills like networking, marketing and web advertising (AdWords, Facebook etc).
- Built a student base of 46, all in a year. That's one new student per week.
- Built business relationships with music agents and dealers for student referrals and commissions.

NETREVEAL TECHNICAL CONSULTANT – October 2014 To November 2016

BAE Systems Applied Intelligence, now called SymphonyAI

Career Objective: To pivot from back-end roles, break into client-facing consulting and develop people skills.

SymphonyAI is a product company which offers a line of AI-enabled SaaS financial crime solutions.

Specialized in client-facing Detica NetReveal deployments for banks & financial firms. Configured KYC, CDD and Watchlist Screening solutions. Gathered requirements, conducted workshops and supported client SIT and UAT testing while on-site. Clients included UOB, GE Life, RHB, Bank Of Montreal and SCB.

SOFTWARE DEVELOPER – March 2011 To July 2014

Transact/IntegraDev

Career Objective: To build a solid software development background.

Transact is a UK based financial wrap service for retail investors. Java fullstack developer across the entire SDLC. Delivered 2 major regulatory projects and was the SME for offshore bonds and distributions.

EDUCATION

Queensland University Of Technology, Brisbane, Australia

Bachelor of Information Technology

Raffles Institution, Singapore

GCE O' Levels, achieving Distinctions in all subjects taken. An alumni of the Gifted Education Programme.

CERTIFICATIONS

Compliance & Risk: ACAMS – Compliance Certification

AI & Automation: Make Automation (Advanced), Make AI Agent Builder, OpenAI

Cloud: AWS Certified Cloud Practitioner. Currently working on the Solutions Architect (Associate) certification.

Agile: CSM – Certified Scrum Master

Project Management: Am currently working on a PMP – Project Management Professional certification.

OTHERS

Fluent in written and spoken **English (native)** and **Mandarin (business)**.

Interests include economics, motorcycles, classical music and jazz. I'm a proficient classical pianist and teacher.
